EV Realty's major truck charging hub featuring Kempower charging solutions opens in California

Kempower and EV Realty are improving access to reliable, scalable charging solutions for fleet operations with the opening of a multifleet truck charging hub in San Bernardino, California. The site

features 74 Kempower Satellites and two Kempower Mega Satellites, offering megawatt charging to serve the various needs of medium- and heavy-duty trucks.

MCS capabilities ensure higher charging speeds and operational flexibility for operators. The multimegawatt site provides large-scale infrastructure with up to 9 MW of capacity, up to 1.2 MW for MCS and 500 kW for CCS, a milestone for heavy-duty electrification in North America.

Electric fleets require scalable infrastructure to support daily operations," said Kempower North America President Monil Malhotra. "The San Bernardino truck charging hub is designed to serve all vehicles, with Kempower's technology delivering the performance and reliability needed to meet the evolving demands of fleets."

Located on a strategic freight corridor near Interstates 10 and 215, the site was made operational through strategic partnerships focused on driving speed and execution. The site featuring 76 Kempower Satellites, which can charge more than 200 trucks per day, will deliver user-friendly, world-class solutions to fleet operators.

"The Inland Empire is where freight from the Ports of Los Angeles and Long Beach gets sorted and sent across the country by truck and rail," said EV Realty CEO **Patrick Sullivan**. "Fleets operating here are doing some of the most important and demanding work in the supply chain. They need reliable and affordable access to high-power charging so that they can move beyond pilots and make electrification a real business decision. That's exactly what we've built here."

Last month, Kempower, Windrose and EV Realty announced the first successful charge using Kempower's Megawatt Charging System in North America, completed at the San Bernardino charging hub. The site

is available for use and located at 580 W. Mill Street, San Bernardino, CA 92410.

Kempower in brief

We design and manufacture reliable and user-friendly DC fast-charging solutions for electric vehicles. Our vision is to create the world's most desired EV charging solutions for everyone, everywhere. Our product development and production are based in Finland and in the U.S., with the majority of our materials and components sourced locally. We focus on all areas of e-mobility, from electric cars, trucks, and buses to machines and marine. Our modular and scalable charging system and world-class software are designed by EV drivers for EV drivers, enabling the best user experience for our customers around the world. Kempower shares are listed on Nasdaq Helsinki Ltd. kempower.com

EV Realty in brief

EV Realty develops, owns, and operates high-powered EV charging hubs designed to solve a critical barrier to fleet electrification: access to reliable, low-cost, scalable grid power. Our Powered Properties® are strategically located near major freight corridors and industrial centers, providing our customers with dedicated, secure charging solutions where and when they need it most. By aggregating multiple fleets onto shared, private infrastructure, we reduce costs, improve truck utilization, and deliver services that critical commercial fleets require to keep moving.
